

BOTOX™

FREQUENTLY ASKED QUESTIONS

WHAT IS BOTOX

Botox™, Dysport™ and Xeomin™ are the three brands of botulinum toxin currently approved by Health Canada to be prescribed for both cosmetic and medicinal purposes. Both Doctors and Nurse injectors have been using Botox™ for years to successfully treat the effects of fine lines and wrinkles making it the world's most popular cosmetic treatment.

How quickly will I see results?

Results can vary for each individual client but generally speaking, you will notice that your skin will begin to appear smoother and more refreshed starting as early as just a few days after the treatment, with the product taking full effect by the 14-day mark. Clients are normally returning for treatments every 6-9 months on average. The more consistent your treatments the longer the effects will last after each session.

How Long Does Botox Last? Is it painful?

Botox results will vary depending on a number of variables such as frequent exercise, high metabolism etc. Generally speaking, clients are normally returning for treatments every 3-4 months on average. The more consistent your treatments the longer the effects will last after each session.

The feeling of a Botox treatment is felt differently by everyone. A majority would describe it as an "uncomfortable pinch" at most. The first time is always a unique sensation however, subsequent treatments will be more comfortable when you already have an understanding of what to expect.

What does Botox™ treat?

Botox is a completely safe way to reverse the signs of aging when professionally injected in proper doses. It's most known as a cosmetic treatment however, it also has amazing effects for treating various medical conditions as well.

For cosmetic purposes Botox treats:

- Wrinkles, Fine Lines, Crow's Feet (eye lines)
- Neck & Masseter Muscles
- Frown Lines + More!

For medical purposes Botox treats: Migraines, Excessive sweating (Hyper-Hydrosis)

What is the downtime for Botox?

There is little to no downtime associated with Botox™. Some side effects might include slight headache, redness, swelling or bruising of the injection sites, which normally subside a few hours after the treatment. Please see our FAQ's below for more in-depth information on post-treatment care.

What should you avoid immediately after your Botox treatment?

Immediately after your Botox Treatment there are various things you should avoid. Here are a couple of habits you're used to that you should stop temporarily:

- Touching or rubbing the area treated with Botox
- Exercising and Strenuous physical activities (for 24-48 hours)
- Taking painkillers and alcohol
- Laying down / sleeping (for 4 hours) Hot showers (for 4 hours); Hot showers (for 4 hours)

Is Botox Safe?

Botox is considered the world's most popular cosmetic treatment and as such has been one of the most researched cosmetic services in the market. Being administered by our experienced, trained/licensed nurse injector.
